A23_pad串扰分析?

找到击中pad,分析相邻pad信号。若其它pad有一个事例信号过阈(阈值从大到小搜索),则计1

目标pad编号: A23	非目标pad信号分析(evts)		
	过第一个阈	过第二个阈	过第三个阈
过第一个阈 3 fc: 146(evts)	4 (3)	0 (0)	0(0)
过第二个阈 20 fc: 646(evts)	42 <mark>(39)</mark>	22(22)	0(0)
过第三个阈 150 fc: 3438(evts)	276 <mark>(273)</mark>	32(28)	2(1)
击中目标pad总计数: 4230(evts)	322 (315)	54(50)	2(1)
总计数: 5000(evts)	其它: 770 evts		

全局阈

1 th: 3fc 2 th: 20fc

3 th: 150fc

红色部分为 九宫格内过 阈pad的总事 例数(不包含 目标pad)

Sum of the hit data

4000

3500

3000

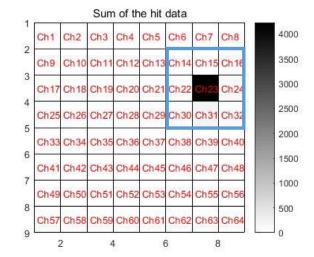

2500

2000

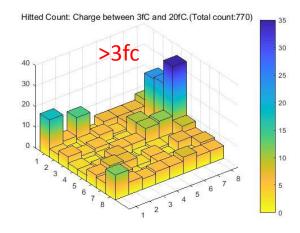

1500

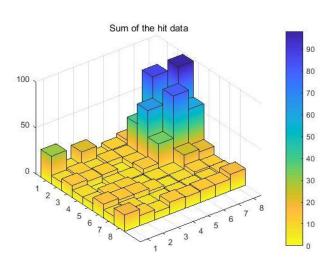

1000

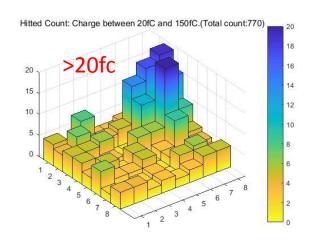

500

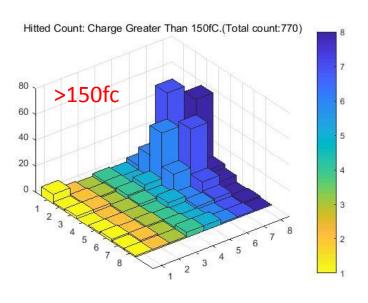

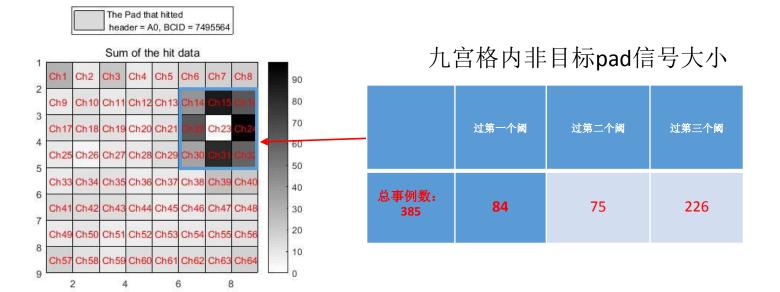

其它770 evts分布

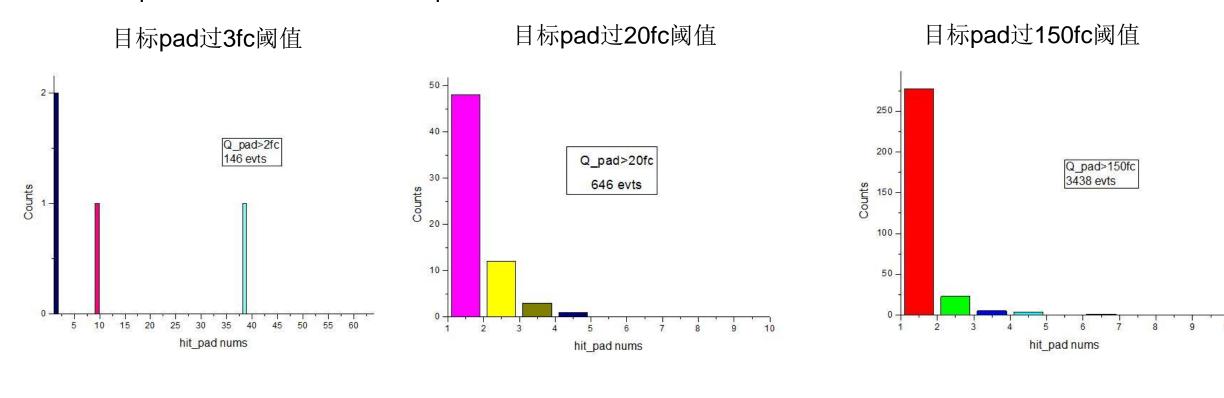

响应pad个数分布

统计目标pad过不同的阈时,区域A上pad响应的个数

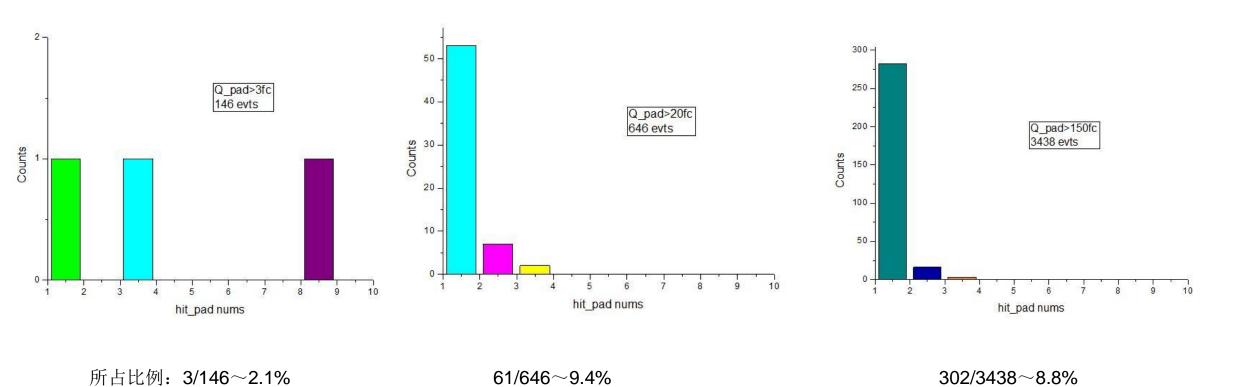

所占比例: 4/146~2.7%

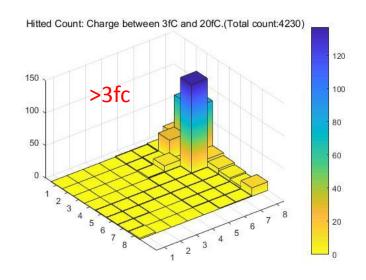

310/3438~9%

64/646~9.9%

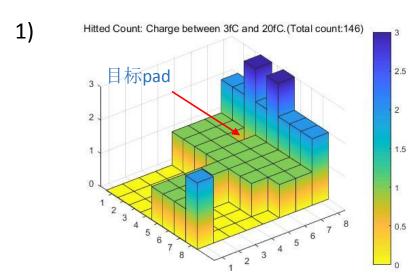

统计目标pad过不同的阈时,相邻pad响应的个数

所有过3fc阈的非目标pad

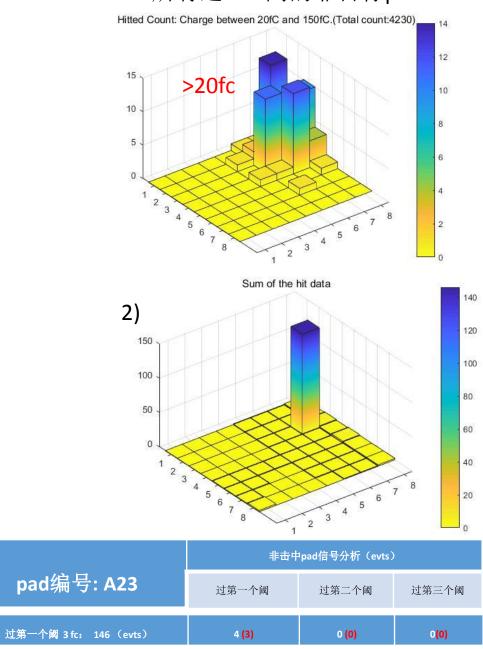

Pad信号过3fc的阈

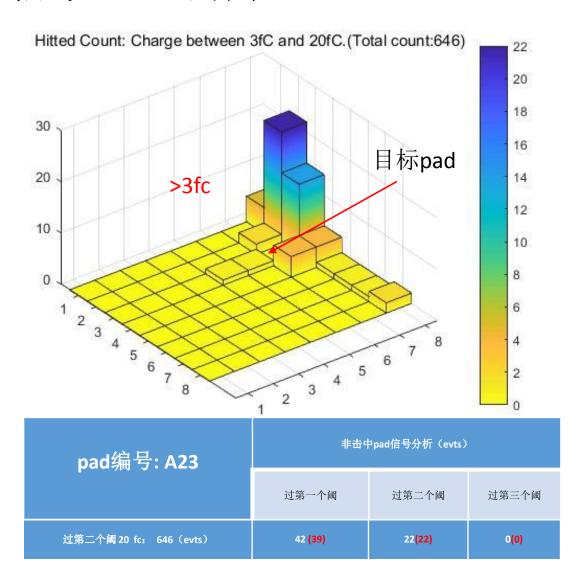

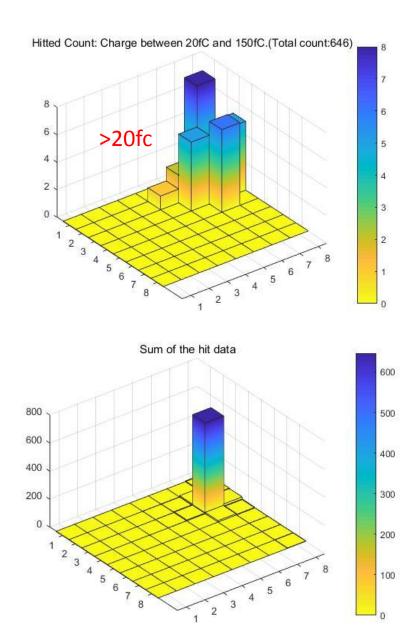

有一个事例绝大部分通道被触发

所有过20fc阈的非目标pad

Pad信号过20fc的阈

Pad信号过150fc的阈
